PROFILE

Full-stack developer in Lagos, **strongest on the frontend** with React, Next.js and TypeScript, and building backends with **Node.js, Express and PostgreSQL**. I ship production software that people use every day: a multi-tenant school management platform at A4 Technologies, student-facing portals at Quant, and complete client websites, all designed for Nigerian users on unreliable connections. I'm also studying Electronic & Computer Engineering at LASU, training as a backend engineer on a fintech track, and was part of the team that **won the Nexus Hackathon** with SolarIQ. Alongside commercial work, I build tools for the Muslim community: Islamic resource sites, scholarly content platforms and madrasah tooling.

EXPERIENCE

◆ Frontend Developer (Contract)

Mar 2026 — Present

A4 Technologies, Lagos · EduGear (edugear.ng)

- Frontend implementation and UI integration lead on EduGear, a multi-tenant school management SaaS for Nigerian secondary schools.
- Built role-based dashboards for Admin, Principal, Bursar, Teacher and Parent, covering fee tracking and finance, results and a parent portal.
- Turned Google Stitch designs into production Next.js and TypeScript screens, using TanStack Query against a NestJS, Prisma and PostgreSQL API, kept light enough for low-bandwidth school connections.

◆ React Frontend Developer

May 2025 — Present

Quant (getquant.app) · formerly TALIB-HQ · AI study assistant for Nigerian university students on WhatsApp

- Built the Campus Scholar portal at scholars.getquant.app, where students upload course materials, earn points and redeem rewards.
- Built the admin portal and wired the REST API into the interface page by page.
- Built the Welcome and OTP email templates in React, and led the hosting migration from Render to Netlify.

◇ Freelance Web Developer

Client work

D'TBB Logistics & Consult (dtbblogistics.com)

- Designed, built and deployed the company's full website on my own: fleet gallery with lightbox, EmailJS quote form and a Google Maps contact page, in React, TypeScript, Tailwind CSS and Vite.
- Set up SEO (sitemap, robots.txt, Google Search Console), the domain and an 8-mailbox Zoho company email (MX, SPF, DKIM), then handed over with a written guide.

CURRENTLY LEARNING

> Payment systems: rails (NIP, RTGS, ACH, SWIFT, PAPSS), the four-party card model, double-entry accounting and reconciliation · AI and LLM applications · Python

SKILLS

FRONTEND

React, Next.js (App Router), TypeScript, JavaScript, Tailwind CSS v4, Vite, TanStack Query, Zustand, React Native, HTML & CSS · also Vue

BACKEND

Node.js, Express, PostgreSQL, REST API design, JWT auth (access + refresh tokens), WebSockets · worked with NestJS + Prisma, Django Channels, Firebase

SHIP & TOOLING

Netlify, Render, Railway, Vercel, Git & GitHub, DNS and email (Zoho, MX/SPF/DKIM), SEO and Search Console, EmailJS, Postman

DESIGN

Figma and Google Stitch designs to production code, design systems, typography, responsive and accessible interfaces

SELECTED PROJECTS

◆ SolarIQ — NEXUS HACKATHON WINNER

Solar panel efficiency monitor · team project

React · Vite · Tailwind CSS · Firebase Realtime Database

- Built the dashboard and Firebase data layer: expected vs. actual power, efficiency and soiling ratio, panel condition and cleaning status.
- Efficiency reports from live sensor data; the ESP32 hardware was built by teammates.

◆ Al Qanitaat — LIVE

Islamic knowledge platform for Muslim women · own project, with friends

React · Tailwind CSS · Node.js · Express · PostgreSQL · Render

- Built every part myself: React frontend, Node/Express API, PostgreSQL database and deployment on Render.
- Articles organised by topic, featured articles, a resources section and an admin content editor for publishing.

◇ TeachSense

AI classroom intelligence · team UNEFET · frontend lead

React · TypeScript · Tailwind CSS v4 · Django Channels · WebSockets

- Built the frontend and a real-time lecturer dashboard over WebSockets, with a ping/pong heartbeat for live session tracking.
- Lecture upload, transcription, summaries and question generation; solved cross-origin deployment across Netlify and Render (CORS, cookies, auth).

◇ TransactFlow

Payment-processing system · solo TechCrush capstone

Node.js · Express

- Backend capstone for the TechCrush "Becoming a Backend Engineer" program on the Payaza fintech track.

◇ Madrasah result-sheet generator

For Ahlul Kitaab Was-Sunnah Academy

Python · Pillow

- Renders Arabic report sheets (Noto Naskh Arabic), built as a reusable library.

◇ Earlier frontend work

AltSchool Africa projects

React · Vue · REST APIs · Paystack

- E-commerce store with cart and Paystack test checkout; Markdown editor with live preview in Vue; a Vue blog consuming a REST API.

EDUCATION & TRAINING

◆ B.Eng. Electronic & Computer Engineering

Lagos State University (LASU)

300 level · expected graduation 2028

◆ Becoming a Backend Engineer

TechCrush

Fintech mentorship track with Payaza

◇ Frontend Engineering Diploma

AltSchool Africa

JavaScript, React, Vue, frontend architecture

◇ Web Development Training

Almattech Academy
